서두

국어, 영어, 수학, 탐구증 어느 과목이 제일 쉬울까? 당연히 영어다. 왜? 똑같은 패턴, 똑같은 원리, 명확한근거! 때문이다. 정답에 근거가 부정확하면 평가원장 사살된다. 때문에 기초적인 단어와 구문만 습득한 선량한 학생이라면 누구든 100점은 받을 수 있다. 정답의 근거를 알려주는 첫줄을 많은 학생들을 (특히 추상적일때) 대충 읽고 멍하니 넘어간다. 또 example과 같은 쓰레기 더미에서 해석이 안되는 부분에서 당황하고 정답을 대충 찍는다. 쓰레기는 파봐야 아무것도 안나온다. 따라서 이 책의 방법대로 야매가 아닌 글을 읽는 방법을 습득해야한다

<도구>

반.기.문: 반전의 기운이 느껴지는 문장

KKIST: 까이는 대상=오상식

부.시.맨: 부연의 시작을 알리는 대상

구정보/신정보:구정보는 모두 아는상식이고(정의) 신정보는 새로운 정보이다.

유치원 교사 : 모두 맞아요, 그러나~

분리수거 업자 : researcher, doctor, professor, scientist

압.정 : 앞내용 정리(this)

주장 신호: must should, not A but B, (the 비교급, the 비교급)

Food intake is essential for the survival of every living organism. The failure to detect spoiled or toxic food can have deadly consequences. Therefore, it is not surprising that humans use all their five senses to analyze food quality. ① A first judgment about the value of a food source is made on its appearance and smell. ② Food that looks and smells attractive is taken into the mouth. ③ The value of a particular food is an estimation of how good it is, based on its level of vitamins, minerals, or calories. ④ Here, based on a complex sensory analysis that is not only restricted to the sense of taste but also includes smell, touch, and hearing, the final decision whether to swallow or reject food is made. ⑤ Frequently, this complex interaction between different senses is inappropriately referred to as 'taste' although it should be better called flavor perception, because it uses multiple senses.

35. Music can convey the scope of a film, effectively communicating whether the motion picture is an epic drama or a story that exists on a more personal scale. Music can convey the quality and size of a space. ① For example, in *Alien* and Olivier's *Hamlet*, the music serves at times to make small and/or artificial spaces seem more grand and to enhance the sense of realism. ② In addition, music can establish a narrative's placement in time. ③ Music for motion pictures often serves to authenticate the era or to provide a sense of nostalgia. ④ Music has traditionally been classified by musical instruments. ⑤ Examples of the former would include *Amadeus* and *Immortal Beloved*, while a sense of nostalgia is communicated through the music selected for films such as *American Graffiti* and *The Big Chill*.

36. It is difficult to appreciate what a temperature of 20,000,000°C means. ① If the solar surface, not the center, were as hot as this, the radiation emitted into space would be so great that the whole Earth would be vaporized within a few minutes. ② Indeed, this is just what would happen if some cosmic giant were to peel off the outer layers of the Sun like skinning an orange, for the tremendously hot inner regions would then be exposed. ③ It is believed that the brightness of the Sun can be predicted theoretically. ④ Fortunately, no such circumstance is possible, and the outer layers of the Sun provide a sort of blanket that protects us from its inner fires. ⑤ Yet in spite of these blanketing layers, some energy must leak through from the Sun's center to its outer regions, and this leakage is of just the right amount to compensate for the radiation emitted by the surface into surrounding space.

38. Some researchers investigated the effects of different media on children's ability to produce imaginative responses. In one study, children in grades one through four were separated randomly into two groups and presented with the same fictional story. One group listened to the story via radio, while the other group watched the story on a television. ① Afterward, all of the children were asked what they thought would happen next in the story. ② The researchers rated children's imaginativeness by recording the novel elements (such as characters, setting, dialogue, and feelings) they used in their responses. ③ Some novelists prefer to include as many characters as possible in their stories. ④ The children who listened to the radio produced more imaginative responses, whereas the children who watched the television produced more words that repeated the original story. ⑤ Media scholars have used this study to illustrate the "visualization hypothesis," which states that children's exposure to ready-made visual images restricts their ability to generate novel images of their own.

39. One of the many strengths of the African American community is an intrinsic support for the athletic endeavors of African American girls and women. ① Since African American culture appreciates a greater flexibility of gender roles and accepts a broader range of gender-appropriate behaviors, African American women are not as bound as white women by gender role stereotypes. ② Athletics for girls and women is not perceived as conflicting with an African American female's gender role. ③ Hall and Bower's study of African American females found that African American women defined themselves as "softly strong" – owning both strength and femininity without conflict. ④ African American males have played an increasingly important role in global politics. ⑤ Welcome support from the African American community has energized many African American girls and women to participate in sports.

A currently popular attitude is to blame technology or technologists for having brought on the environmental problems we face today, and thus to try to slow technological advance by blocking economic growth. We believe this view to be thoroughly misguided. ① If technology produced automobiles that pollute the air, it is because pollution was not recognized as a problem which engineers had to consider in their designs. ② Solar energy can be a practical alternative energy source for us in the foreseeable future. ③ Obviously, technology that produces pollution is generally cheaper, but now that it has been decided that cleaner cars are wanted, less polluting cars will be produced; cars which scarcely pollute at all could even be made. ④ This last option, however, would require several years and much investment. ⑤ Although technology is responsive to the will of the people, it can seldom respond instantaneously and is never free.

School physical education programs should offer a balanced variety of activities that allow young people to develop ability in lifetime activities that are personally meaningful and enjoyable. A balance should exist in any physical education program among team, dual, and individual (lifetime) sports. ① Team sports such as basketball and soccer provide an opportunity for students to develop skills and to enjoy working and competing together as a team. ② However, in many school physical education programs, team sports dominate the curriculum at the expense of various individual and dual sports, like tennis, swimming, badminton, and golf. ③ In such cases, the students lose the opportunity to develop skills in activities that they can participate in throughout their adult lives. ④ Baseball, in particular, is one of the most popular sports frequently broadcast on TV. ⑤ Only through a balanced program of team, dual, and individual sports is it possible to develop well-rounded individuals.

* dual: 둘의

Scientific experiments should be designed to show that your hypothesis is wrong and should be conducted completely objectively with no possible subjective influence on the outcome. ① Unfortunately few, if any, scientists are truly objective as they have often decided long before the experiment is begun what they would like the result to be. ② This means that very often bias is (unintentionally) introduced into the experiment, the experimental procedure or the interpretation of results. ③ It is all too easy to justify to yourself why an experiment which does not fit with your expectations should be ignored, and why one which provides the results you 'hoped for' is the right one. ④ It is important to draw a meaningful result from the experiment on peer group activities. ⑤ This can be partly avoided by conducting experiments 'blinded' and by asking others to check your data or repeat experiments.
